Disaster Recovery, Business Continuity, and Enterprise Backup Management System

When All Else Fails

Despite the best intentions and pro-active measures to enhance data security and follow backup procedures, your system is always vulnerable to loss of data. There are many risks to your data including man-made or unintentional acts of God. Whether or not the loss of data has devastating consequences for your system may depend on the effectiveness of your backup and recovery process. Implementing Northern Data Systems Enterprise Backup Management guarantees that your data is always safe and can always be recovered when you need it most

Backup and Recovery

Backup and recovery requires that four essential steps be taken to be sure your critical data is available when you need it following a data loss. These steps include:

- ❖ **Data Capture** – ensure data files are captured reliably and accurately.
- ❖ **Data Removal** – move captured data offsite quickly
- ❖ **Data Storage** – ensure captured data is protected from intrusion and damage.
- ❖ **Data Recovery** – ensure data can be recovered within an acceptable timeframe

Enterprise-Class Data Protection

The Enterprise Backup Management System from NDS covers all four backup and recovery steps and combines them into one easy to use service. Your data is backed up without human intervention and replicated automatically via the Internet to NDS's Enterprise Backup Servers in our state-of-the-art data center. These backups are then archived to tape as well as transmitted to our off-site co-location facility in Youngstown, Ohio. In the event that you need to recover data our team of support professionals can quickly locate your current data and restore it to your system in a timely and secure fashion.

Protect What Matters Most

Now you too can protect what matters most, **your mission critical data**, in a secure and more importantly risk free manner. By combining data replication with off-site storage and data archive in one single-source affordable solution, NDS customers can enjoy the same enterprise-class protection once reserved for Fortune 500® companies. Most importantly, you can be confident and minimize the risk associated with any loss of data with the Enterprise Backup Management System from NDS.
