

EDIFICE™ Miscellaneous AR

INTEGRATION

Miscellaneous AR is integrated with EDIFICE Service Management, Inventory and General Ledger which makes it easy to capture cost and financial information without redundant entries.

UNLIMITED OPTIONS

With its virtually unlimited charge code and charge description options, the Miscellaneous AR system can be configured to generate bills for any occasion, situation, or departmental need.

EFFICIENCY

Detailed bills for inventory, labor, and equipment can be generated directly from work order related functions. The bills flow through to a separate Miscellaneous AR service on a customer so that usage charges and service related charges stay segregated, but offer a single, centralized billing center on your customer's account.

- Miscellaneous AR is designed to interface to EDIFICE Service Management and allows for detailed charges to be billed to customers.
- Unlimited user definable charge codes and descriptions, as well as access to inventory items make billing easy.
- Miscellaneous AR bills, once printed, can be stored for future viewing or reprinting with a simple click.
- Jobs that require multiple Miscellaneous AR invoices can easily be billed and tracked by job name.

Powerful and Flexible Billing

The EDIFICE Miscellaneous Accounts Receivable (AR) System provides your utility with the tools necessary to bill non-metered type charges with ease and efficiency. This fully integrated and flexible module is designed to bill service related charges (parts, labor, equipment and travel) for a particular location or prepare a bill for a non-utility customer for all types of ancillary services including snow removal, mowing services, or police details. The Miscellaneous AR system is fully integrated with EDIFICE Service Management, Inventory and General Ledger, which makes it easy to capture cost and financial information. The Miscellaneous AR also supports a Bill of Material setup that makes billing complex repetitive charges a snap. Receivables can be tracked as part of the customer's utility related charges or they can be tracked independently.

Designed and written using today's contemporary technology, the EDIFICE Miscellaneous AR system provides utility districts and departments with a powerful and flexible software tool. The user interface emphasizes ease of use and efficiency. Architected and built directly by Northern Data Systems, Miscellaneous AR is a module of the EDIFICE system. Whether you choose to implement Miscellaneous AR now or in the future, you can have confidence that the entire system is designed to work together.
